John	
English Thesis Title (论文题目):	
Student Attendance Management System	
Chinese Translation of Thesis Title (论文题目中文翻译):	
学生出勤管理系统	
Research Direction (论文方向):	
Now waiting further update after discussion with supervisor	
What chapter are you currently on?	Percentage-wise completion of your report?
Chapter 4	80%
In 150 words, please summarize the progress made so far with your report. The Student Attendance Information Management project has reached its main implementation stage as a web application using Node.js, Express, PostgreSQL, HTML, CSS, and JavaScript. The system supports login, secure password hashing, session management, and role-based access for administrators and viewers. Core attendance features include adding, viewing, editing, deleting, searching, and filtering records by student, class, course, and status. Input validation and database constraints help prevent invalid or duplicate data. The dashboard shows attendance totals, punctual, late, and absent counts, student numbers, class statistics, and recent activity. The system also supports CSV/TXT import, CSV export, and audit logs for admin actions. The interface includes login, overview, records, input dialog, and activity log pages.
